

OPENNTF WEBINARS

February, 2022 OpenNTF Webinar

What's new in 12.0.1 for Developers including the new
QueryResultsProcessor

AGENDA

- Welcome – Howard Greenberg and Graham Acres
- Presentation – John Curtis, HCL
- Q and A - All

THANKS TO THE OPENNTF SPONSORS

- HCL made a contribution to help our organization
 - Funds these webinars!
 - Contests like Hackathons
 - Running the organization
- Prominic donates all IT related services
 - Cloud Hosting for OpenNTF
 - Infrastructure management for HCL Domino and Atlassian Servers
 - System Administration for day-to-day operation

HCL NOTES UI CONTEST

- OpenNTF is co-sponsoring HCL Notes UI Contest with GroupWave
- The new application should work within **Notes Client V12.0.1 and Nomad** for mobile devices (both iOS and Android)
- Entries will be judged on usability, compatibility, and technical design
- The jury consists of HCL Ambassadors and HCL employees
- Winners announced at Engage in May!
- More info at <https://www.groupwave.be/contest/>

THIS IS OUR COMMUNITY

- Join us and get involved!
- We are all volunteers
- No effort is too small
- If your idea is bigger than you can do on your own, we can connect you to a team to work on it
- Test or help or modify an existing project
- Write guides or documentation
- Add reviews on projects / stars on Snippets

UPCOMING EVENTS

- Engage 2022 – Bruges, Belgium – **NOW** May 23-25, 2022
 - <https://engage.ug/>

NEXT WEBINAR – DOMINO ADMIN TOOL

- March 17, 2022
- Heather Hottenstein, HCL
- Register at <https://www.openntf.org/webinars>

ASKING QUESTIONS

- First Question – Will this be recorded?
 - Yes, view on YouTube!!!
 - <https://www.youtube.com/user/OpenNTF>
- Use the Questions Pane in GoToWebinar
- We will get to your questions at the end of the webinar
- The speakers will respond to your questions verbally
 - (not in the Questions pane)
- Please keep all questions related to the topics that our speakers are discussing!!!
- Unrelated Question => post at:
 - <http://openntf.slack.com/>

WHAT'S NEW IN 12.0.1 FOR DEVELOPERS

John Curtis

HCL Domino

February 2022 OpenNTF Webinar

What's new in 12.0.1 for Developers
featuring QueryResultsProcessor views

John Curtis

Domino Core Application Team Lead

john_curtis@pnp-hcl.com

Twitter - [@john_d_curtis_](https://twitter.com/john_d_curtis_)

Agenda

- Named Documents
- Named Result Sets
- DQL Improvements
- QRP Views

New in v12.0.1 - Named Documents

- Named Documents
 - Uses a String keys to store and retrieve documents without NoteIDs
 - Functional alternative to Profile documents, resolves:
 - Hard-wiring to threads – so updates don't work (not even for the same user)
 - There is NO Name Document cache
 - In common with Profile Notes
 - API exposure, hidden documents
 - Can only create and find ND created through backend
- **Rule of thumb** – *use Name documents on servers, profile documents on clients*
- Containing in (Notes)Database, methods and properties:

`Set doc = db.GetNamedDocument(<name>, <username>)`

returns a new (Notes)Document like any other except it is indexed

- <name> a unique string (conflicts otherwise) – your construction
- <username> qualifies the unique string for a given user

Named Documents (continued)

- Containing in (Notes)Database, methods and properties:

Set doc = db.GetNamedDocument(<name>, <username>)

returns a new (Notes)Document like any other except it is indexed

- <name> a unique string (conflicts otherwise) – your construction
- <username> qualifies the unique string for a given user

Set doccol = db. GetNamedDocumentCollection(<name>)

- <name> - same name value as in GetNamedDocument – Optional
- If <name> is specified, all <username>-keyed documents are retrieved that use that <name>
- If NOT specified, all named documents in the database are returned

Named Documents (continued)

- (Notes)Documents methods and properties

Set nd = doc.IsNamedDoc/GetNamedDoc()

- Returns True/False whether a document is named or not

Set name = doc.NameOfDoc/getNameOfDoc()

- Returns <name> specified in GetNamedDocument, empty string if not a named document

Set user = doc.UserNameOfDoc/getUserNameOfDoc()

- Returns <username> specified in GetNamedDocument, empty string if not a named document

Set nn = doc.IsNewNoteDoc/IsNewNote()

- returns True if GetNamedDocument was used and the key is new

DQL embedded Formula Language

- Embedded Formula Language
 - Syntax
 - @FL or @formula (case insensitive)
 - Embedded syntax enclosed in single quotes

@fl('@length') > 2430

@FORMULA('@left(fld1;3) = "abl" or @left(fld2;2) = "ab"')

- Provides
 - Intra-document terms (between different fields)
 - Full expression support
 - HUGE library of existing functionality
- ***Burning question – “Should I be using DQL?”***

New in v12.01 – Named Result Sets

- Create and save important sets of documents under a name for quick reuse
- No need for views of FT indexes – can use document data only
- New Java and LotusScript (Notes)DominoQuery execute method arguments

DocumentCollection execute(String query, *String resultname*, *boolean replace*) throws NotesException

DocumentCollection execute(String query, *String resultname*, *boolean replace*, *int expirehours*) throws NotesException

resultname - unique name for this document set

replace – replaces the current document set saved under that unique name

expirehours – how many hours until the document set is discarded (default 24)

Named Result Sets (continued)

- To reuse the document set, use DQL `in clause`

Save:

```
Set doccollection1 = dql.execute("field = 'value' or .. and ..", "docset1", true, 8760)
```

Reuse:

```
Set doccollection2 = dql.execute("in ('docset1') and field2 = 'value2'")
```

- Gain in performance – 100x to 1000x faster
- Some details
 - Use cases – reporting, daily/hourly documents searched for all the time
 - Static document sets – do NOT refresh automatically
 - Database limits (500 per database, 50MB in total stored size) – can be overridden
 - They expire – discarded automatically by updall – but settable (8760 is one year)

Named Result Sets (continued)

- Named result sets and updall

(load) updall <dbpath> -j <opt> manages named named document sets, see options below

deleteOne <name> deletes one named document set

deleteAll deletes all named document sets

deleteOld deletes old, expired named named document sets

report generates a report of named named document sets

- deleteOne overrides expiration date
- deleteAll destroys all named document sets in a database – powerful, use carefully
- More controls using backend classes:
 - (Notes)Database .RemoveAllQueryNamedResults

(Notes)QueryResultsProcessor (QRP)

- Reading materials
 - https://help.hcltechsw.com/dom_designer/12.0.0/basic/H_NOTESQUERYRESULTSPROCESSOR_CLASS.html
 - https://help.hcltechsw.com/dom_designer/12.0.0/basic/H_QUERYRESULTSPROCESSOR_CLASS_JAVA.html

 - <https://jdcurtis.blog/2021/11/30/the-query-results-processor-part-two/>
 - <https://jdcurtis.blog/2021/12/02/the-queryresultsprocessor-part-three/>
 - <https://frostillic.us/blog/posts/2022/1/13/dql-queryresultsprocessor-and-jnosql>

(Notes)QueryResultsProcessor (QRP)

- DQL
 - As a Domino search service, finds documents from a single database
 - Allows traversal through result sets using DocumentCollection logic
 - Does NOT
 - Fetch viewable/presentable data from the database
 - Sort data by anything other than NoteID
 - Get results from multiple databases
 - Do that all on the fly, with discardable results
- So .. the (Notes)QueryResultsProcessor was built
 - Delivered in 2 parts in v12 and v12.0.1

(Notes)QueryResultsProcessor (QRP)

- Use cases
 - Cyclical/periodic reporting (including regulatory)
 - Atomic data element data gathering (a case, a user, a part)
 - Snapshot, point-in-time recording of state (e.g. workflow as of a certain point or every day, week, month, quarter)
 - Underlying documents may change, but their old state remains
 - Other ... (you tell us)

(Notes)QueryResultsProcessor (QRP)

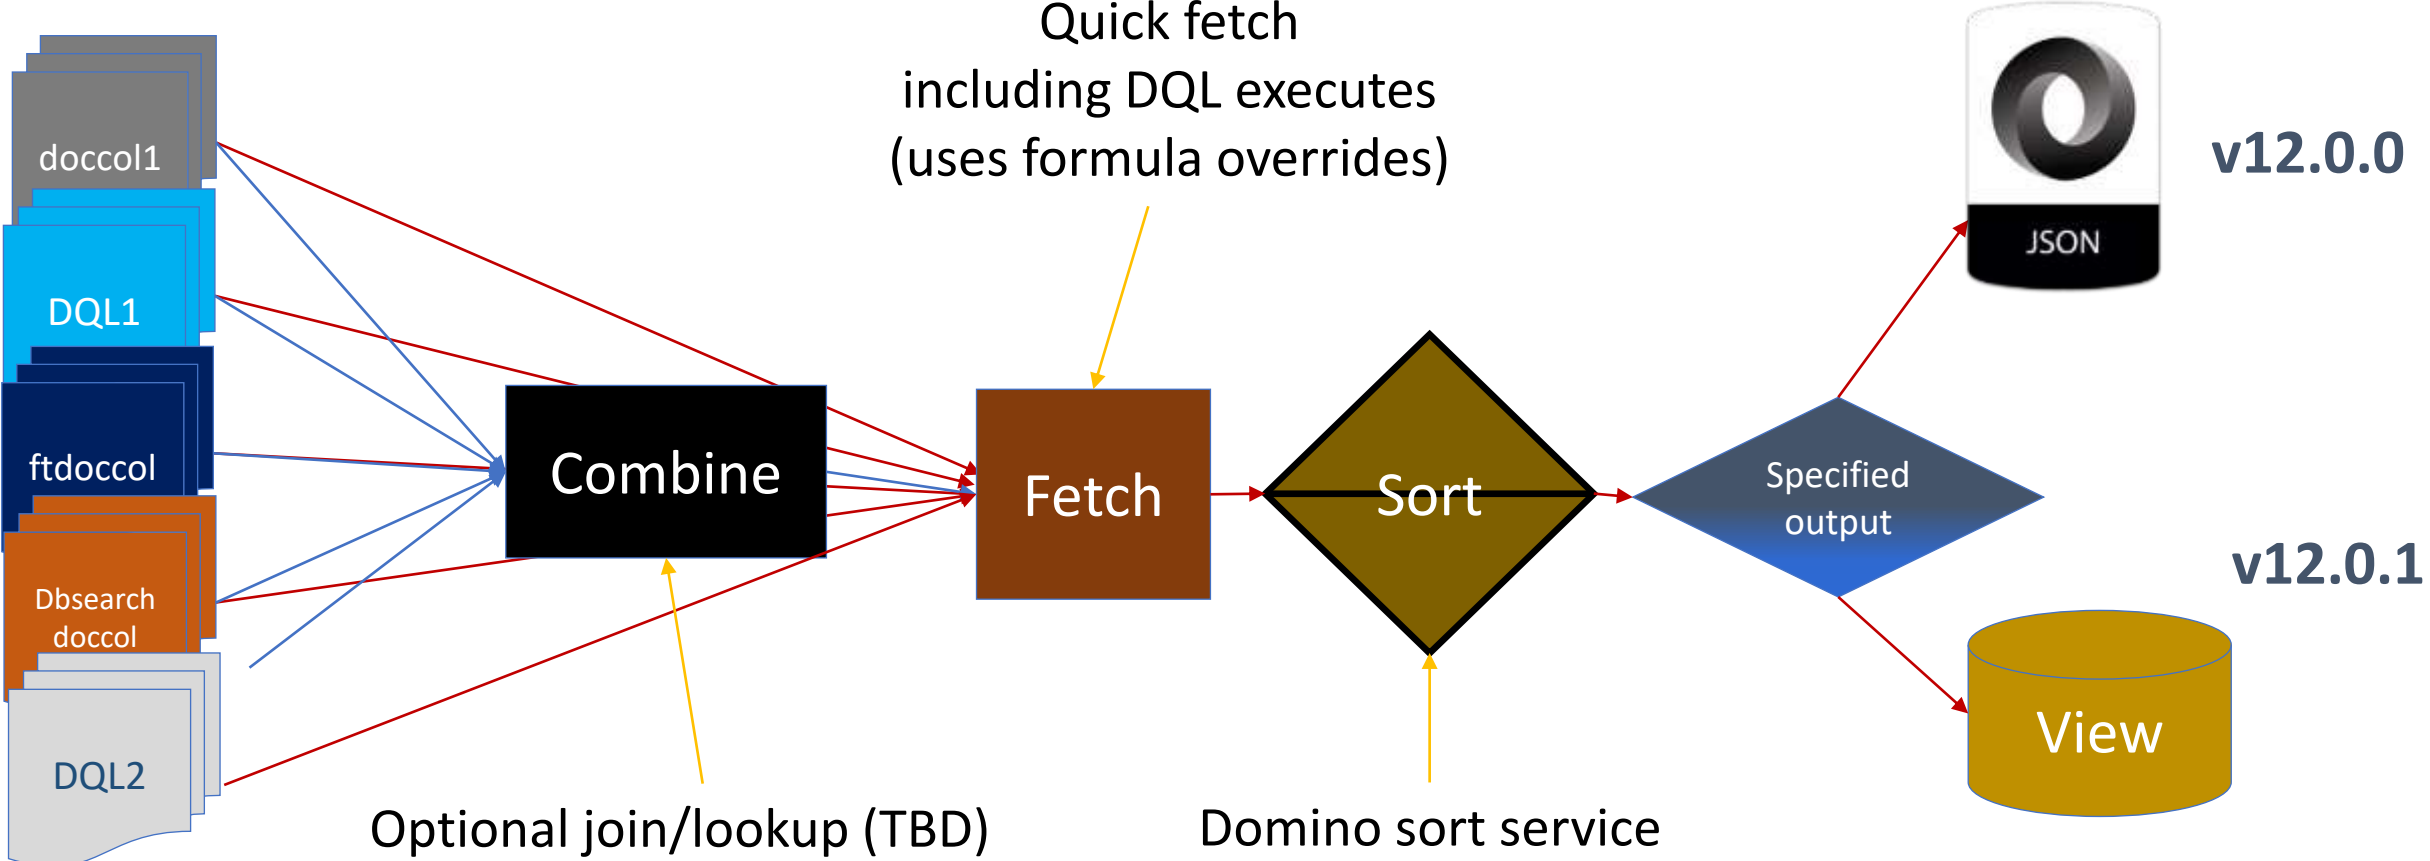

- Quick API overview
 - (Notes)QueryResultsProcessor instance – in a host (Notes)Database
 - AddDominoQuery or AddCollection – must have at least one named set of documents
 - AddColumn – must have at least one programmatic name, view column title, formula and attributes
 - AddFormula – to override the formula for any named column and named set(s) of documents

QRP views DEMO

(Notes)QueryResultProcessor flow

Input

(Notes)DocumentCollections

Thoughts on Results (QRP) views

- Consider how you create a view in Designer, at minimum you need
 - Selection criteria
 - Columns to compute view data, sort it, etc.
- QRP views are the same, though programmatic, and allow separate
 - Selection criteria for each set of documents
 - Computed column rules for each set of documents
- QRP views are different in that
 - Their data spans databases and sets of documents
 - Built as query results, not as refreshable, replicable design elements
 - Created to expire, be programmatically rebuilt and populated

QRP views – vital concepts

- Results views (or QRP views):
 - Are secured at the VIEW LEVEL – you pass in a readers list (or “*”)
 - Are hidden views
 - Are designed to expire and be purged automatically
 - You can override – 8760 hours is one year
 - Can contain data from any database given any criteria
 - Can be stored in any database (recommend – create a dedicated QRP db)
 - Have artificial NoteIDs that can be found in the view but nowhere else
 - Have hidden column at the end to provide database path and original NoteID
 - Support categorization, hidden columns, aggregates for average and sum
 - From the HCL Notes® UI, will open the original document with double click

QRP views admin

- To see what QRP views exist in a database, use

```
> show database QRPHost.nsf e
```

```
QRP Host Database
```

Results View sizes	Bytes	Expires
(5CTADADATDHTA)	2,058,496	10/12/2021 01:18:49 PM
(Trudi 2017 Autumn Sales)	571,296	10/19/2021 04:11:17 PM
(SalView)	4,871,612	10/19/2021 03:03:51 PM

- QRP views will expire on their own but to delete a QRP view either use backend (Notes)View remove call or

```
nupdall QRPhost.nsf -Tx SalView
```

```
...
```

```
Results view (SalView) in c:\domino\data\QRPhost.nsf deleted (expiration 10/19/2021 03:03:51 PM)
```

QRP views restrictions

- Results views (or QRP views) are
 - Are NOT refreshed – you must delete and recreate
 - Do NOT replicate
 - Do NOT enforce document security – unless one tries to open the original document
 - Do NOT tolerate Designer changes to their structure (e.g. add column)
 - Display (fonts and colors) CAN be modified successfully
 - Results are unpredictable if you do modify structure and you will need to rebuild

Questions/Comments

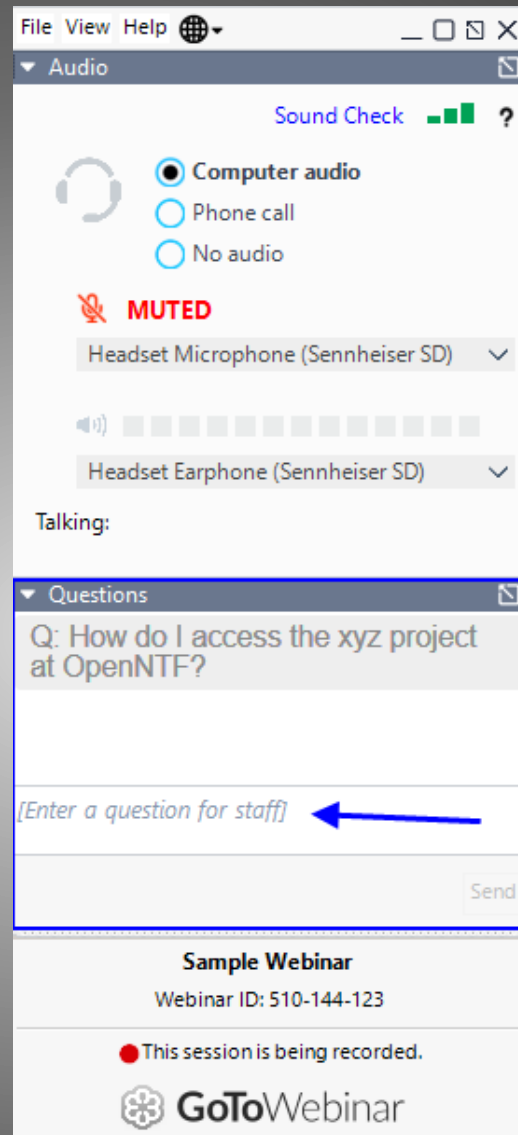

QUESTIONS?

Use the GoToWebinar Questions Pane

Please keep all questions related to the topics that our speakers are discussing!!!

Unrelated Question => post at:

<http://openntf.slack.com/>

The screenshot displays the GoToWebinar interface. At the top, there is a menu bar with 'File', 'View', and 'Help'. Below it, the 'Audio' pane is visible, featuring a 'Sound Check' indicator with three green bars and a question mark. Underneath, there are three radio button options: 'Computer audio' (selected), 'Phone call', and 'No audio'. A red 'MUTED' status is shown with a microphone icon. Below this, two dropdown menus are set to 'Headset Microphone (Sennheiser SD)' and 'Headset Earphone (Sennheiser SD)'. A 'Talking:' section is also present. The 'Questions' pane is open, showing a question: 'Q: How do I access the xyz project at OpenNTF?'. Below the question is a text input field with the placeholder text '[Enter a question for staff]' and a blue arrow pointing to it. A 'Send' button is located at the bottom right of the question pane. At the bottom of the interface, it says 'Sample Webinar' with 'Webinar ID: 510-144-123'. A red dot indicates 'This session is being recorded.' and the GoToWebinar logo is at the very bottom.
